Re: Persistent organic pollutants (POPs) Declaration for Hot Rolled Steel Coils

North Star BlueScope Steel is providing the following information for its hot-rolled steel coils. Under the United Nations Environmental Program (UNEP), The Stockholm Convention on Persistent Organic Pollutants is a global treaty whose purpose is to safeguard human health and the environment from persistent organic pollutants (POPs), which are highly harmful chemicals that persist in the environment and affect the well-being of humans as well as wildlife.

To the best of our knowledge and belief, based on the raw material inputs, as of the date of this letter, North Star BlueScope Steel LLC does not intentionally add any POPs chemicals to the hot rolled steel coils during the manufacture process.

North Star BlueScope Steel, LLC continues to monitor for new developments or updates to POPs requirements and performs periodic reviews for any changes that may apply to steel produced. This letter remains subject to future review and update to reflect any future updates or developments.
